

ELIMINATE ODOR WITH OUR PROVEN SCIENTIFIC APPROACH

Our scientists have developed a multi-dimensional process that is customized to your specific needs. You get comprehensive solutions that are environmentally friendly, fit your budget and are backed by expert resources to help you tackle technological issues, regulatory dilemmas and more.

DON'T JUST MASK ODOR – ELIMINATE IT AT THE SOURCE WITH NCM ODOR CONTROL'S SCIENTIFIC THREE-FOLD APPROACH:

Neutralization ► Odors can be acidic or alkaline. NCM analyzes the pH of the specific malodor involved, and then neutralizes the odor through a “redox,” an oxidation/reduction reaction with the basic or acidic molecule. Oxidation and reduction occur simultaneously and in equal amounts during the process, rendering the malodor to a neutral state.

Absorption ► Odor perception is partly dependent on the solubility of the odor molecule in the mucous membranes along the nasal passages. NCM products absorb and trap odor molecules, greatly reducing the amount of odor molecules that can reach the nasal passages.

Alteration ► NCM products are designed to react synergistically with odor molecules to achieve a balance of molecule pairs that cancel each other out, and/or to create unrecognizable molecules that cannot be detected by nasal receptors. When the equilibrium point is reached, the perception of the offensive odor is altered and cannot be detected.

Choose a Safe Solution

NCM Odor Control products are safe for your workers, safe for the landfill and safe for the environment. All active ingredients are GRAS, and, used as directed, do not pose any biological or ecological threat.
